

# Info Tech Workshops Designed for Deaf Now at NTID

January 8, 2001

Two information technology workshops designed for and available only to deaf and hard-of-hearing people are being offered at the National Technical Institute for the Deaf (NTID), a college of Rochester Institute of Technology (RIT).

The five-day workshops, PC Hardware Maintenance and Repair, offered February 26-March 2, and Object-Oriented Programming Using Microsoft Visual Basic 6.0, offered April 30-May 4, are part of the Deaf Initiative in Information Technology (DIIT), supported by a grant from the National Science Foundation, and are held in NTID's state-of-the-art DIIT classrooms. Additional workshops are planned for 2001 and 2002.

"Having the perspective of other deaf adults while learning new software and technology was very beneficial," said Patrick Murray, a product tester at IBM in Austin, Texas, who attended the first DIIT workshop, Creating Web Sites with FrontPage 2000. "Each participant shared their experiences from the work world and built a solid network of people who could support each other in the future."

Registration is limited to 12 attendees for each workshop, and will be accepted on a first-come, first-served basis. The cost of the weeklong workshop is \$550. For information on the workshops or to register, contact the program's e-mail address at [diit@rit.edu](mailto:diit@rit.edu) or visit the Web site at <http://www.rit.edu/diit>.
