

Perceptions of Privacy on Facebook Subject of Thesis

Bruce A. Austin baagll@rit.edu

4 August 2008

Elizabeth Warfel presents her Communication & Media Technologies master's thesis on Monday, 11 August beginning at 11 a.m. in 01-3381.

Her study focuses on the differences between heavy and light users' perceptions of privacy on Facebook. Results from a 25-question survey revealed that heavy users of social networking sites perceive a greater depth of communication on Facebook and have a more accurate perception of Facebook's privacy policy than did light users of social networking sites.

The public is invited to attend the thesis presentation.

An e-newsletter published occasionally by the Department of Communication and distributed to students and their family, alumni, faculty and others who have expressed an interest in communication.
